

R2S Subsea

Return To Scene Limited delivers award-winning software, visualisation and digitalisation solutions to the world's biggest companies.

As one of the earliest adopters and largest producers of visual data, subsea oil and gas tackles the management of vast quantities of data from multiple sources, while operating in challenging environments.

Return To Scene supports its subsea clients to manage this data efficiently, effectively and safely, maximising its value.

What if all your data was in one place?

R2S Mosaic is an industry leading asset information management software.

It significantly reduces operational costs by providing your team and suppliers access to all pertinent operational data – instantly and contextualised with visual data.

It brings all of your existing visual data, from any source or data type, coherently together making it accessible, re-usable and valuable.

R2S Subsea shows you the whole picture

Subsea design visualisation

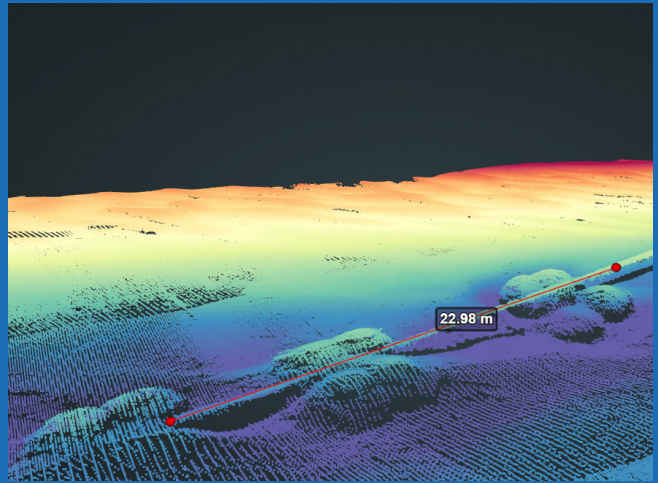

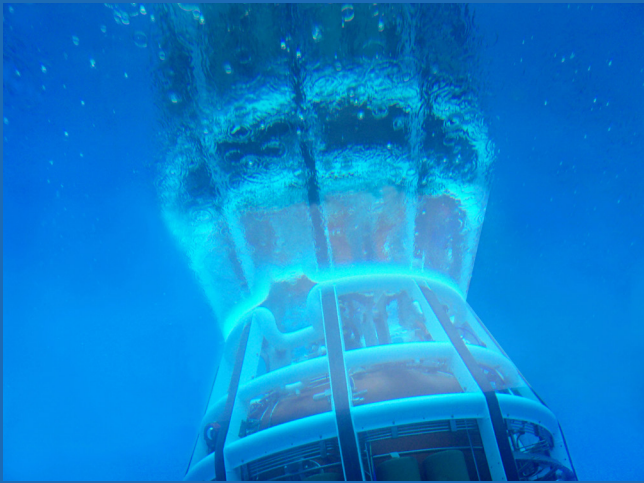

Realising the value of visual data at every phase of operational lifecycle from concept design to decommissioning.

Pre-commissioning

Post factory acceptance testing (FAT) photogrammetric survey of subsea equipment prior to installation; generating reality data and point cloud visualisation for operational management.

Survey and operational management

Visualising your subsea infrastructure, point cloud and ROV footage and seabed conditions. Integrate all existing 3rd party survey, model data, existing operational databases and live data feeds – creating your digital twin.
